

# Package ‘ellipsis’

April 4, 2026

**Version** 0.3.3

**Title** Tools for Working with ...

**Description** The ellipsis is a powerful tool for extending functions. Unfortunately this power comes at a cost: misspelled arguments will be silently ignored. The ellipsis package provides a collection of functions to catch problems and alert the user.

**License** MIT + file LICENSE

**Encoding** UTF-8

**RoxygenNote** 7.1.1

**URL** <https://ellipsis.r-lib.org>, <https://github.com/r-lib/ellipsis>

**BugReports** <https://github.com/r-lib/ellipsis/issues>

**Depends** R (>= 3.2)

**Imports** rlang (>= 1.1.7)

**Suggests** covr, testthat

**NeedsCompilation** no

**Author** Hadley Wickham [aut, cre],  
RStudio [cph]

**Maintainer** Hadley Wickham <hadley@rstudio.com>

**Repository** CRAN

**Date/Publication** 2026-04-04 05:11:12 UTC

## Contents

check_dots_empty . . . . .	2
check_dots_unnamed . . . . .	2
check_dots_used . . . . .	3
safe_median . . . . .	3

<b>Index</b>	<b>5</b>
--------------	----------

---

check\_dots\_empty      *Check that dots are unused*

---

### Description

Sometimes you just want to use `...` to force your users to fully name the details arguments. This function warns if `...` is not empty.

### Arguments

`env`                  Environment in which to look for `...`

`action`                The action to take when the dots have not been used. One of `rlang::abort()`, `rlang::warn()`, `rlang::inform()` or `rlang::signal()`.

### Examples

```
f <- function(x, ..., foofy = 8) {
  check_dots_empty()
  x + foofy
}

try(f(1, foof = 4))
f(1, foofy = 4)
```

---

check\_dots\_unnamed      *Check that all dots are unnamed*

---

### Description

Named arguments in `...` are often a sign of misspelled argument names.

### Arguments

`env`                  Environment in which to look for `...`

`action`                The action to take when the dots have not been used. One of `rlang::abort()`, `rlang::warn()`, `rlang::inform()` or `rlang::signal()`.

### Examples

```
f <- function(..., foofy = 8) {
  check_dots_unnamed()
  c(...)
}

f(1, 2, 3, foofy = 4)
try(f(1, 2, 3, foof = 4))
```

---

check_dots_used	<i>Check that all dots have been used</i>
-----------------	---

---

### Description

Automatically sets exit handler to run when function terminates, checking that all elements of ... have been evaluated. If you use `on.exit()` elsewhere in your function, make sure to use `add = TRUE` so that you don't override the handler set up by `check_dots_used()`.

### Arguments

env	Environment in which to look for ... and to set up handler.
action	The action to take when the dots have not been used. One of <code>rlang::abort()</code> , <code>rlang::warn()</code> , <code>rlang::inform()</code> or <code>rlang::signal()</code> .

### Examples

```
f <- function(...) {
  check_dots_used()
  g(...)
}

g <- function(x, y, ...) {
  x + y
}
f(x = 1, y = 2)

try(f(x = 1, y = 2, z = 3))
try(f(x = 1, y = 2, 3, 4, 5))
```

---

safe_median	<i>Safe version of median</i>
-------------	-------------------------------

---

### Description

`safe_median()` works `stats::median()` but warns if some elements of ... are never used.

### Usage

```
safe_median(x, ...)
```

```
## S3 method for class 'numeric'
safe_median(x, ..., na.rm = TRUE)
```

**Arguments**

<code>x</code>	Numeric vector
<code>...</code>	Additional arguments passed on to methods.
<code>na.rm</code>	For numeric method, should missing values be removed?

**Examples**

```
x <- c(1:10, NA)
safe_median(x, na.rm = TRUE)
median(x, na.rm = TRUE)

try(median(x, na.rm = TRUE))
try(safe_median(x, na.rm = TRUE))

try(median(1, 2, 3))
try(safe_median(1, 2, 3))
```
